Slide Heading A

The proof uses *reductio ad absurdum*.

Theorem

There is no largest prime number.

1. Suppose p were the largest prime number.
2. Let q be the product of the first p numbers.
3. Then $q + 1$ is not divisible by any of them.
4. But $q + 1$ is greater than 1, thus divisible by some prime number not in the first p numbers.

Slide Heading B

Here is a list:

- Item X.
- Item Y.

A numbered list:

1. Point 1
2. Point 2
